COMMUNICATION

The European Patent Office herewith transmits the partial European search report under Rule 46(1) EPC relating to the above-mentioned European patent application.

Copies of the documents cited in the search report are enclosed.

The applicant's attention is drawn to the following:

The search Division informs the applicant that if the European search report is also to cover inventions other than the invention first mentioned in the claims, a further search fee must be paid for each of these inventions, within ONE MONTH after notification of this communication,

if the application has been filed up to 30 June 1999, the search fee in force before 01 July 1999 (EUR 869.--) or the equivalent applicable on the date of payment is payable. This applies also to the search fees requested under Rule 46(1) EPC. See also 0.0 EPO 06/1999, 405.

The abstract was modified by the Search Division and the definitive text is attached to the present communication.

Additional set(s) of copies of the documents cited in the European search report is (are) enclosed as well. $\left(\circ a \right)$

Note to users of the automatic debiting procedure:

Unless the EPO receives prior instructions to the contrary, the search fee(s) will be debited on the last day of the period for payment. For further details see the Arrangements for the automatic depting procedure, Supplement to OJ EPO 02/1995.

LACK OF UNITY OF INVENTION SHEET B

Application Number EP 01 30 7252

The Search Division considers that the present European patent application does not comply with the requirements of unity of invention and relates to several inventions or groups of inventions, namely:

1. Claims: 1,2,4-6,7-9,11,13-16

The subject-matter of claims 1,2, 4-6,7-9, 13-16 concerns the definition of the structural components of a semiconductor device or liquid crystal module which contains a semiconductor element mounted on one side of a flexible substrate. The flexible substrate is folded down in a U-shape such that the semiconductor element faces a member which is connected to the end terminals of the flexible substrate (see Fig. 1).

Claim 11 defines a method suitable for manufacturing the liquid crystal module of claims 7-10. Said method involves bonding a spacer to the back surface of a flexible substrate and folding an end portion of the flexible substrate in a U-shape and fixing the folded end portion to the spacer. Then the connection terminals of the flexible substrate are connected to a liquid crystal panel (see Fig. 6(a)-8(c)).

2. Claims: 3, 10

The subject-matter of claims 3 and 10 concerns the definition of the structural components of a semiconductor device which contains a semiconductor element mounted on one side of a flexible substrate. The device and module also contains a printed wiring substrate. The flexible substrate is folded at both ends in a U-shape such that the semiconductor element, the printed wiring substrate and a member, connected to the end terminals of the flexible substrate, are substantially in the same plane (see Fig. 4).

3. Claim: 12

Claim 12 defines a method suitable for manufacturing the liquid crystal module of claims 7-10. Said method involves partially folding down the end portion of a flexible substrate and connecting the end terminals of the flexible substrate to a liquid crystal panel. A spacer is then connected, by bonding, to the partially folded end of the flexible substrate. Finally, the flexible substrate is folded down into a U-shape around the spacer (see Fig. 9(a)-10(c)).

The three groups of claimed devices are linked by the concept of folding a conductive flexible substrate which connects at least 2 electronic components. However, this concept is clearly neither novel nor inventive, as required by Article 82 EPC. The application has been divided into the above groups of inventions which individually are considered to meet the requirement of unity.

This arriex lasts the patent family members relating to the patent documents ored in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file or the patent office services are the purpose of information. The European Patent Office is no way stable for these particulars which are merely given for the purpose of information.
